NEWS RELEASE

EXPANDER ENERGY SUPPORTS KITIMAT CLEAN LTD. OIL REFINERY PROJECT

Calgary, AB. (March 14, 2013) - Expander Energy Inc. is pleased to announce that David Black and Kitimat Clean Ltd. intend to utilize Expander's FTCrude® patented and patent pending technology for their new 16 billion dollar refinery. Their refinery is to be built near Kitimat, B.C. and financed by Switzerland- based Oppenheimer Investments Group.

Plans for the refinery were announced on March 6, 2013 at a presentation to the B.C. Chamber of Commerce, the text of which was published at <http://bit.ly/WSMKz7>.

"An innovative Calgary company, **Expander Energy**, has recently patented a new approach to processing heavy oil. We will be the first in the world to use it. All other heavy oil refineries use coking equipment. Our consultants estimate Fischer-Tropsch will increase our capital costs by \$3 billion. But it will decrease greenhouse gasses per barrel by 50%. Our refinery will now be much, much cleaner than any other heavy oil refinery in the world," said Mr. Black.

"We are very excited about this initiative with Kitimat Clean and Oppenheimer. Their utilization of our FTCrude® technology will greatly enhance the environmental integrity of the refinery and generate significant benefits for the Alberta, B.C. and Canadian economies" said Expander CEO, James Ross.

Expander Energy has the patented and patent pending Enhanced Fischer-Tropsch® processes that maximize the conversion of carbon to valuable synthetic fuels - SynDiesel® SynJet® and FTCrude® while significantly reducing greenhouse gas emissions.
